Dear Reader,

The decade of the 1980s has brought tremendous growth and change to Florida. In order to plan in a changing environment, citizens and decision-makers need access to information so they can better understand the issues and trends influencing growth.

This edition marks the third year of **Florida County Perspectives**. The information in the book was collected from the annual reports and publications of over twenty different state and federal agencies. The purpose of the publication is to allow the reader to gain an increased understanding of one or all 67 of Florida's counties.

All of the data in **Perspectives** has been computerized and is available on floppy disks for easy retrieval and manipulation. If you have any comments or suggestions about new data sources or how we can improve the contents or format, please let us know.

[1] As of June 30 for each year

[2] Rank: 1 = lowest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

1 An establishment is a single physical location where business is conducted or where services or industrial operations are performed.

2 See Notes

3 Rank: 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

[1] Rank 1 = highest (range 1-67)

[2] Rank 1 = lowest ratio (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

1
Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[1] Statistical Note: The primary use of these data is for Federal fund allocation. Caution is urged when using these data for short-term Economic analysis. The sum of statewide employment and unemployment may not equal labor force due to rounding.

[2] Rank 1 = lowest (range, 1-67) When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Population Per Square Mile is calculated by dividing the total county population by the total number of square miles in each county.

1 square mile = 2.59 square kilometers

POPULATION DENSITY: 1930-1987

Persons per Square Mile

[2] Rank 1 = highest (range 1-66)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

[1] Rank 1 = largest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Projections are based on different sets of assumptions regarding the growth of a county. In this table the projections represent the middle or medium series.

* Metropolitan County

1
Detail may not add to total shown due to rounding. "Wartime" veterans include those serving during the Vietnam era and Korean conflict with no prior wartime experience, and World Wars I and II.

Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

** Hendry county data are consolidated with Glades.

[1] Rank 1 = lowest (range 1-66)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

[1] See Notes

[2] Rank 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Rank 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

◊ Represents an increase or decrease from a zero base

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

3 4 Rank 1 = highest (range, 1-66), (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

1 Rank 1 = highest (range 1-59); 2 (range 1-66); 3 (range, 1-67)

4 Rank 1 = lowest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

NOTES

In every table counties with an asterisk (*) beside their name are metropolitan counties.

A metropolitan county is a county that is part of a Metropolitan Statistical Area (MSA). All other counties are non-metropolitan counties. In 1989 Florida had 32 metropolitan and 35 nonmetropolitan counties.

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus.

Each MSA has one or more central counties containing the area's main population concentration: an urbanized area with at least 50,000 inhabitants. An MSA may also include outlying counties which have close economic and social relationships with the central counties.

Number of Farms, Harvested Cropland: 1969, 1974, 1978, 1982
A farm, as defined for the 1978 and 1982 census, is any place from which $1000 or more of agricultural products were sold or normally would have been sold, during the census year.

The previous definition (used for the 1959, 1964, and 1969 censuses, and for the 1974 preliminary county reports) counted a farm as any place with less than 10 acres from which $250 or more of agricultural products were sold or normally would have been sold during the census year, or any place of 10 acres or more from which $50 or more of agricultural products were sold or normally would have been sold during the census year.

* The ranges for the map values were developed by dividing the data into percentile intervals. A percentile is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. When distributions are divided into fifths, the 20th, 40th, 60th and 80th percentiles, for all practical purposes, become the critical percentile values.

Page 7 **CRIME**
Total Number of Offenses Reported: 1987

3
Percent Cleared: For crime reporting purposes, a crime index offense is cleared when a law enforcement agency has identified the offender, there is enough evidence to charge him and he is actually taken into custody. The arrest of one person can clear several crimes or several persons may be arrested in the process of clearing one
crime.

Crime solutions are also recorded in exceptional circumstances when some element beyond law enforcement control precludes formal charges against the offender.
